

Greener gardens with Arginex

A plant-first nutrition technology for garden brands who want reliable performance, healthier plants, and sustainable nutrition that benefits pocket and planet.

Natural ingredients consisting of arginine complexed with phosphate.

Arginine is the most nitrogen-rich molecule found in nature.

The arginine-phosphate complex is stable and non-living.

Nutrients are released gradually in the root zone.

The formulation stays where it is applied instead of leaching away.

Why garden brands choose Arginex

Clear differentiation in a crowded category

Arginex is not a blend of mixed amino acids or live microbes. It is a defined arginine-based technology with consistent quality and predictable behaviour — batch after batch.

Designed for scale and consistency

Arginex has long shelf-life — suitable for retail, private label, and distributor portfolios. The stable formula is replicable and identical in every batch.

A sustainability story that holds up

Arginex is rooted in science, validated in the real world to improve nutrient efficiency and reduces losses — supporting healthier soils and more resilient root systems.

Arginex = bound nitrogen + root activation + soil regeneration

More performance, less waste with Arginex inside

Integrate Arginex into your portfolio either as a standalone product, a value-add ingredient endorsed by the “Powered by Arginex” brand.

Stronger root systems and earlier establishment.

Healthier, more stress-tolerant plants.

Better nutrient efficiency with less waste.

Cleaner sustainability messaging.

Consistent quality and scalable brands.

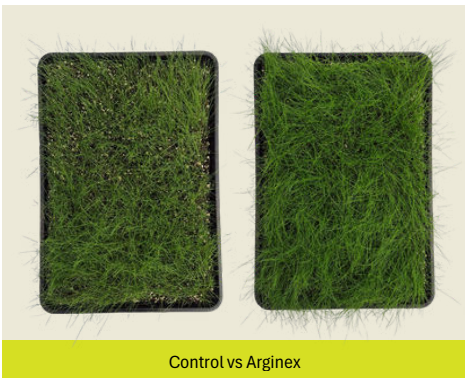

Ideal for garden producers and distributors

Arginex is available in liquid, granular and coating-compatible formats, enabling easy integration into existing product lines or new innovations.

Lawn and turf starter fertilizers.

Potting mix & substrate enhancers.

Vegetables & home-growing ranges.

Trees, shrubs & ornamentals.

Let's build better garden products together.

Arginex helps garden brands deliver visible plant performance while supporting healthier soils and more responsible nutrient use. Talk to us about:

- Powered by Arginex co-branding.
- Trials by crops, product categories, and regions.
- Technical data, commercial and application support.
