

# Farming is unpredictable. Arginex is not.

Arginex is a next-generation crop nutrition technology from Arevo containing both fertilizer ingredients and amino acids designed for stronger roots, healthier crops, and more sustainable harvests.

High-purity, single-compound formula

---

Precisely engineered for specific target function

---

No live cultures or unreliable blends

---

Long shelf life

---

Rooted in science

---

Reduce or complement standard treatment

---

Proven in the field (60+ field trials in Europe, South America and North America)

From seed to soil to spray:  
Arginex adapts to your  
preferred application method

Seed coating

Granular

Liquid spray

Arginex = bound nitrogen + root activation + soil regeneration

Control vs Arginex

## More crops per unit nitrogen.

Arginex delivers organic nitrogen based on arginine for the world's primary crops. Our patented technology complexes arginine with phosphate — a stable, non-microbial, soil-binding formula giving higher nitrogen use efficiency. In other words, more crops per unit nitrogen.

### Potatoes with Arginex deliver:

Higher marketable yield and overall yield vs. untreated control

+6.4% increase in yield vs. untreated control

Complements standard fertilization programs

Easy application through in-furrow spray

Control vs Arginex

### Soy plants with Arginex deliver:

4.5 – 6.0% higher yields vs. untreated control

6.0 – 8.0% increase in plant health (NDVI)

Up to +8.0% increase in plant height

3× more active nodules compared to untreated

Control vs Arginex

### Corns with Arginex deliver:

No loss in germination or plant health (NDVI)

Up to +8.0% increase in plant height

Additional grain yield of 255.65 kg/ha (up to +4.3% vs. untreated), even with 20% less farmer-applied fertilizer

Results repeatable across different soil pH, textures, and 3 continents

# Revolutionizing global agriculture from the ground up

Read more at [arevo.se](http://arevo.se) or email [info@arevo.se](mailto:info@arevo.se)

Arevo offers a new alternative to harmful mineral fertilizers: working with biology, not against it. Its proprietary Arginex crop nutrition technology activates the root zone in a way no other product does, resetting the fundamentals of crop nutrition, empowering growers to produce more with less.

This isn't just another input. It's a catalyst and a movement for systemic change: sparking a chain reaction that makes the whole system stronger and helps growers transition away from harmful chemicals. Rooted in science, and proven in the fields, Arevo stands for redefining agriculture from the ground up.
